KR219RRSF-ROLLER REGISTRATION SCORE FOLDING SYSTEM: Add roller registration folding capabilities to your attaching and inkjet printing systems with the KR219RRSF. Designed to handle a wide variety of product including those containing cards, magnets or product samples, the KR219RRSF helps bring automation capabilities to your operation. The KR219RRSF is engineered to produce letterpress style creasing and buckle folder style folds so you can avoid outsourcing forever. Rollers register the product accurately as it enters the KR219RRSF. Vacuum belts and individually spring loaded urethane rollers transports the piece through the folding section. The folding sec-

tion aligns easily with the score using the adjustment handle. Options are available for expanding KR219RRSF capabilities. For additional folds, run inline with a KR219FM. Glue systems are easily added for sealing the piece closed. Camera scanning systems verify or lookup and track each piece through the system for inkjet printing after the fold.

KR 516 QUARTER FOLDER: The KR 516 handles a range of product from thin pieces 7" wide by 5" long to full size newspapers up to 64 pages thick. The belt folding system on the KR 516 enables it to run at higher speeds while two sets of spring loaded pinch rollers ensure a tight fold. An all timing belt drive reduces parts wear and maintenance. Use the KR 516 inline with most major brands of addressing and inserting systems.

KR 738 ENVELOPE CONVERTING SYSTEM: Convert your flat product into a mail-ready envelope with inserts inside through our all in

Kirk-Rudy KR 738

one system; Feed, Score, Collate Inserts, Glue, Fold and Inkjet all in the Same Pass. The KR 738 is a standalone machine running off-line from other machines. A lug driven chain carries the envelope product underneath each feeder to collate the inserts. The envelope is then glued and folded around the inserts inside it and then transported onto vacuum belts that carry product beneath the Net Jet print head to print the shipping address.
