

Parcel/Mailbox Lockers

§ Pitney Bowes Inc.

CATEGORY: Parcel/Mailbox Lockers

PRODUCT: ParcelPoint™ Smart Lockers

COMPANY: Pitney Bowes Inc., 27 Waterview Drive, Shelton CT 06484. Contact: PitneyBowes.com/omg.

DESCRIPTION: ParcelPoint™ Smart Lockers from Pitney Bowes are the simple, modern solution to manage evolving mail and package delivery, asset management and storage demands. They increase efficiencies in your mailroom while providing a safe, secure, convenient delivery experience. With preconfigured, indoor, outdoor, and rear-loading locker designs available, we have a solution to fit your specific volume, space, layout and workflow requirements. Plus, our smart lockers seamlessly integrate with package receiving software, PitneyTrack™ Inbound, ensuring real-time tracking and chain of custody for all your inbound package deliveries.

ParcelPoint™ Smart Lockers facilitate an easy to use, contactless pick-up experience. Once the operator delivers an item to the locker, it automatically triggers a configurable email notification to the recipient. At the

Pitney Bowes ParcelPoint Smart Lockers

locker kiosk, the recipient scans the barcode included in the email, or enters a unique PIN code for secure access. Additional access options such as RFID badge scanning and a Mobile app are available as well. The designated locker door automatically opens for them to retrieve their package. With signature confirmation or photo capture options, you will

have a record of each transaction for full accountability.

FEATURES: To optimize compartment space, ParcelPoint™ Smart Lockers offer additional workflows that can be used in conjunction with package delivery. Asset Distribution can simplify equipment drop off for service or repair, and provide convenient, contactless access for anyone to pick up internal assets or supplies. Day Use is the smart, secure way for your employees, guests or students to temporarily store personal items and equipment without the need for keys, locks and inefficient manual processes. In addition, ParcelPoint Smart Lockers are powered by Shipping 360™, a SaaS based platform, so your staff will be equipped with remote locker management and full visibility into locker usage as well as actionable analytics and reporting.

SELF-SERVICE SENDING KIOSK: The ParcelPoint™ Self-Service Sending Kiosk is designed to streamline the sending of mail and packages by allowing users to accurately weight and measure packages, print shipping labels and postage stamps at any time - all in one convenient station, reducing mail center staff's workload and delivering an easy-to-use self-service kiosk. The kiosk can help make any one a sending expert by offering multicarrier shipping through USPS, UPS, and FedEx. A package dimensioner accurately captures package & envelope dimensions, calculates weight and ensures users are always paying the right amount.

§ QUADIENT

CATEGORY: Parcel/Mailbox Lockers

PRODUCT: Parcel Pending by Quadient

COMPANY: Parcel Pending by Quadient, 475 Goddard #150, Irvine, CA 92618. Phone: 866-628-9804.

DESCRIPTION: Quadient is the leading provider of innovative package management solutions for residential, retail, carrier, and university clients. Parcel Pending by Quadient lockers is a smart, secure, and self-service solution for deliveries and retrievals. The easy-to-use interface enables businesses to track parcels delivered using the system and notify recipients of delivery in real time. Pick-up takes a matter of seconds and users can access their deliveries at their convenience 24/7. With over 70 million packages delivered annually, Pending offers various indoor, outdoor, refrigerated, and oversized solutions to support all delivery types and sizes. Parcel Pending will partner with you to design system configurations and workflows that meet your unique business needs and requirements (including custom designs and color wraps).

Step 1 – Place parcel into the locker. Recipient instantly notified of delivery via email/SMS/mobile app.

Step 2 – Recipient enters access code or scans barcode.

Step 3 – Package retrieved.

HOW IT WORKS: Parcel Pending by Quadient smart lockers can alleviate crowded mailrooms and eliminate multiple delivery attempts. Plus, users can pick up packages at their convenience, 24/7. Recipients are automatically notified via text or email when a parcel arrives. The recipient enters their access code (or scans a barcode) for contact-free access to their delivery.

FEATURES: Parcel Pending solutions provide total security for deliveries and reduce risk of theft; allow for up to 24/7 on-demand package access; streamline the delivery process and reduce the space needed to accept deliveries; ensure 100% chain of custody with automatic logging of each delivery and pick-up; allow for seamless integration with existing software systems and tracking platforms via open API; include photo capture and signature-required option for additional security; support any user with ADA compliant design; provide choice of email or text notification for passcode.
