Database/Postal Software

§ Assurety Consulting & Solutions

CATEGORY: Database/Postal Software

PRODUCT: AIMSplus™ Postal Automation Software

COMPANY: Assurety Consulting and Solutions, 100 Carpenter Drive, Suite 206, Sterling, VA 20164. Tele: (866) 750-4924. Email: Sales@AssuretyConsulting.com

DESCRIPTION: Modern Mail.dat® post presort, postal compliance, postage optimization, logistics, and mail tracking in one browser based, on-premises, platform.

Commercial mailers, mail owners, comminglers, consolidators, presort bureaus, transportation partners, banks, insurers, nonprofits, and high-volume mail operations face daily pressure to process more mail, reduce postage leakage, stay compliant with USPS requirements, support customer visibility, and manage operations across multiple plants.

AIMSplus™ by Assurety Consulting and Solutions is a modern Mail.dat post presort software platform (includes support of Mail.XML and JSON APIS) designed to replace desktop era limitations with centralized, browser-based automation, enterprise scalability, responsive support, and flexible integrations. AIMSplus™ is “Beyond Desktop. Beyond Limits™,” with user friendly workflows, responsive experts, customization support, browser-based multitasking, centralized automation, custom APIs, and support for annual volumes from 5 million to 4 billion pieces. AIMSplus™ is built to grow with every mailer. From small volume operations using AIMSplus™ Lite, to mid-tier commercial mailers processing 500M pieces with AIMSplus™ Professional, to enterprise mailers managing 4B+ pieces annually with AIMSplus™ Enterprise, the platform delivers scalable automation, postal compliance, postage optimization, logistics efficiency, mail tracking visibility, and meaningful cost savings for every size operation.

Unlike traditional desktop based post presort software that often depends on workstation installs, separate site deployments, manual updates, limited multitasking, and fragmented data, AIMSplus™ is positioned as a centralized platform with browser access, one installation that can support enterprise sites, automated USPS and data feeds, unified data across facilities and users, CSV, Excel, JSON and API interoperability, and a modern interface. The software allows for prevention of undocumented errors, simplified troubleshooting, integrated PostalOne! exports, centralized validation, mail tracking integration, Informed Delivery campaign automation, and more.

AIMSplus™ helps mailers move from disconnected desktop tasks to an integrated operating platform. MailAssurety™ provides a web based Mail.dat editor with eDoc, Full Service, Seamless Acceptance, Informed Delivery, PostalOne! integration, and APIs. SeamlessAssurety™ validates Mail.dat files for Seamless Acceptance compliance using mail class, shape, Full Service, Move Update, eInduction, and USPS Seamless Acceptance rules. PalletAssurety™ enables presort merging,
