Insignia6 Die Cutter

§ Rollem International

CATEGORY: Die Cutting Systems

PRODUCT: Insignia Die Cutting Machines

COMPANY: Rollem International, 1650 S Lewis St., Anaheim, CA92805-6413. Phone: 800-272-4381. Web: www.insigniadiecut.com.

DESCRIPTION: The Insignia machines can die-cut shaped direct mail, carriers and much more. The machine is offered in three sheet sizes; Insignia6H handles up to a 20x20" or 51x51cm maximum, and the largest Insignia7H will run a B2 size 30x24" or 76x61cm sheet. The New InsigniaX3 handles up to 24x24" (61x61cm) with thicker stock weights up to 30 pt. thickness. Each model includes the automatic stripping unit which diverts the waste or sheet matrix downward to deliver the finished, cut product on a slow moving shingle delivery or a StackMaster bin delivery.

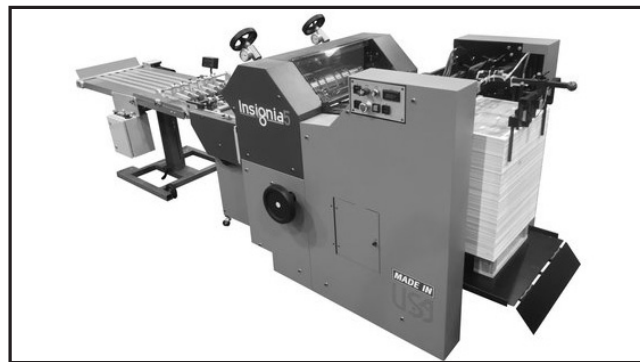

FEATURES: Insignia Die Cutters are designed for ease of operation, fast changeovers and production levels for both short runs to high volume, repeat jobs.

Utilizing flexible die technology, the Insignia machines are capable of being changed from job to job in a matter of minutes. Featuring a press-style register system and top suction air feeder, the Insignia can process a range of materials and stocks anywhere from 50LB cover weight papers all the way up to 30pt card.

OPTIONS: Available with each Insignia model, Rollem offers the PLUS feature designed to simplify finishing for digital print users. The PLUS unit consists of an integrated, easy to use touchscreen control panel. Jobs can be set-up and saved for repeat runs and include run speeds, batch sequencing and other parameters. Verification and skew features are also included on the PLUS control. Ideal for not only set-ups but also for training new machine operators.

Each Insignia performs die-cutting but Insignia is available standard in a Dual Magnetic "H" design which utilizes a paired set of male and female dies. This is ideal for packaging or carton work. A Single Magnetic design is desirable when primar-

§ Tritek Technologies, Inc.

CATEGORY: Digital Mail Systems

PRODUCT: Tritek Digital Mail Sorting & Processing Equipment

COMPANY: Tritek Technologies, Inc., 1-B Medori Boulevard, Wilmington, DE 19801. Contact: Sales Email: solutions@tritek.com Phone: 302-223-4065

TRITEK COMPACT: The Tritek Compact Series Equipment features a small footprint size for letter mail, flats and document processing. The compact design allows for large imaging over 300 dots per inch scanned omni directionally. Tritek's 12 by 17 inch scan area enables entire 8.5 by 11 inch and legal-sized documents to be scanned. The Compact series is designed to time and date stamp documents and mail. It is Sarbanes Oxley compliant - a record is created and stored to a file. These records can then be searched or emailed whenever required. The mail piece is duplex scanned (front and back-side).

COMPACT ELITE: The Compact Elite is designed for email processing and imaging. The scan area enables complete front and back side imaging. These images are stored, time and date stamped for records retention or email delivery. The small footprint Compact Elite features large scale imaging in a compact machine size. The Compact Elite is less than 8 feet in length. The machine uses standard electrical power 115 volt AC. The Compact Elite interfaces with Tritek's Email Delivery System and Tritek Rule Editor Database Management Software. The Compact Series can be fitted with an ink jet printer or any number of Tritek sort bins or optional features. The standard machine has two sort bins for sorting processed items or rejected pieces.

INBOUND SORTING SYSTEMS: No matter how you flip it, Tritek equipment can read it, sort it, store it and track it. The

Digital Mail Systems

Tritek Compact Elite

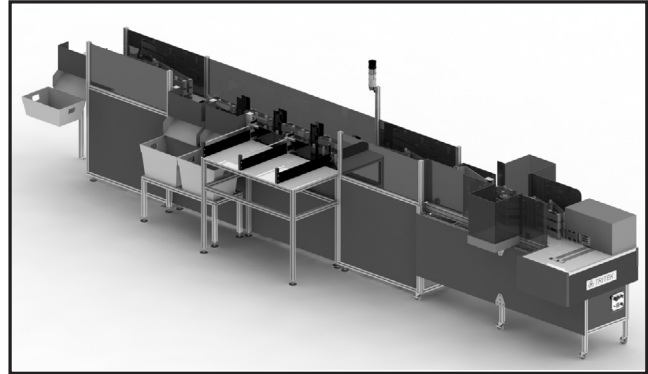

Tritek sorting machine is designed to read the address of all mail pieces regardless of what direction they are fed into our machine. Tritetek has the only mail processing equipment that can read envelopes, magazines, newspapers, poly-wrapped pieces in any direction in a 12" x 17" viewing area, without adjustments, even on the front and backside of the mail piece! The recognition software captures an image of the entire document in grayscale (other reading applications can be integrated if desired). The image can then be stored and tracked.

NOMAD - HIGH RESOLUTION PORTABLE DOCUMENT SCANNER: The Nomad is portable, plugs into 120V AC receptacles, and can read any type of document or envelope. It handles odd shapes such as handwritten notes, forms, or letters and any thickness ranging from single sheets to magazines. The high resolution 300 dpi imaging creates TIFF, PEG or PDF files in black & white or color. The workflow of all Tritetek document scanning machines is highly configurable and integrates well with third-party software applications. While Tritetek includes Doc-U-Search – our own leading-edge storage and retrieval software - the operator can select alternate applications to perform image capture, post-scan processing or document indexing and storage.

DIGITAL EMAIL DELIVERY: An ideal solution for when you are out of the office and need to retrieve your mail. The Tritetek Digital Email System is designed to deliver email notification of inbound mail to its recipients, as it is received each day, for internal company-mail distribution. You can also use the Tritetek Digital Email System to deliver by email scanned images of contents of any mail piece.

FEATURES: The Tritetek Digital Email System: 1) Scans and captures images of both sides of an incoming mail piece; 2) Stores each image in a TIFF, JPEG, or PDF file; 3) Labels each
